

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at page 5, line 19, with the following rewritten paragraph:

What is needed, is therefore, is a system as initially referred to, through which unnecessary or useless signalling ~~can be~~ is reduced. Still further, a system is needed through which fault situations ~~can be~~ are avoided such as, for example, ~~such in which for example when~~ a mobile station uselessly sends requests, ~~and when subsequent requests will fail since~~ after the signalling connection has been taken down. Still further a system is needed through which it can be avoided that a mobile station ~~erroneously will request~~ unnecessarily requests a PS signalling connection ~~connections connection for sending subsequent requests unnecessarily~~ when a PS signalling connection is already is up and running.
